

exam 21-22 PAR

$$CF(A) = 0.4 \quad B = 0.9 \quad C = 0.7$$

$$D = 0.8$$

(ex 2)

1) if $(A \text{ and } B) \text{ or } C \rightarrow E$ $CF = 0.8$

2) if $(C \text{ or } D) \rightarrow E$ $CF = 0.9$.

1) $\min(0.4, 0.9)$

$$\max(0.4, 0.7) = 0.7 \times 0.8 = \boxed{0.56}$$

2) $\max(0.7, 0.8) = 0.8 \times 0.9 = \boxed{0.72}$

combinaison $0.72 + (1 - 0.72) \times (0.56) = \underline{0.8768}$

b) apesar de uma regra que diminua E
há de dar valor negativo.

usando, $CF(G) = 0.5$

if $(G \text{ and } B) \rightarrow E$ $CF(-0.5)$

$$\min(0.5, 0.9) = 0.5 \times (-0.5) = \boxed{-0.25}$$

casos diferentes

3) DS. $m(A) = 0.1 \quad B = 0.05 \quad C = 0.3 \quad AB = 0.2 \quad AC = 0.3 \quad BC = 0.15$
 $ABC = 0$

| | A | B | C | AB | AC | BC | ABC |
|-----|-----|------|------|------|------|------|-----|
| Bel | 0.1 | 0.05 | 0.3 | 0.25 | 0.7 | 0.15 | 1 |
| Pl | 0.5 | 0.3 | 0.75 | 0.7 | 0.95 | 0.9 | 1 |
